DETAILED ACTION

Page 2

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claims 17-47 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for reflowing a patterned organic layer, does not reasonably provide enablement for reflowing an organic layer (i.e., not patterned). The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. All of the claims recite an "organic layer" which is reflowed. For example, page 4 of the specification teaches that the invention reflows a patterned organic layer.
- 3. Claims 17-47 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for reflowing by exposure to an organic solvent or heat, does not reasonably provide enablement for reflowing at a temperature of 15 to 40 degrees Centigrade. The

Application/Control Number: 10/773,272 Page 3

Art Unit: 1756

specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The specification (see page 4 for example) teaches the treatment includes exposure to the vapor of an organic solvent at 15 to 40 degrees Centigrade or heat at 50-300 degrees Centigrade to cause the reflow.

- 4. Claims 19, 29,31 and 40 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the thickness of the deformed organic layer being one-fifth, one-tenth or one-half the thickness of the organic layer, does not reasonably provide enablement for the thickness of the deformed organic layer being one-third or less of the thickness of the organic layer. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The specification teaches that the deformed organic layer is one-fifth, one-tenth or one-half of the thickness of the organic layer (see, for example, page 11 of the specification). The specification does not have the teaching of one-third as recited in claim 19.
- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 10/773,272 Page 4

Art Unit: 1756

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 17-47 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 23 recites that the layer is exposed to a temperature of 50-300 degrees Centigrade. It is not clear if this is a separate step or the same heating recited in claim 17. If it is the same heating step as claim 17, the limitation is not further limiting. If it is a separate step, it is not clear when it occurs since the specification does not teach the combination of the exposure to the organic solvent and a high-temperature exposure.

Claims 26, 27 and 38 are not clear in reciting, "Ar is Phenyl group or aromatic ring except said phenyl group".

Double Patenting

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d

Application/Control Number: 10/773,272

Art Unit: 1756

937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Page 5

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 8. Claims 17-47 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 2, 6, 10, 17-19, 22-24, 27-33, 37-39 and 43-45 of U.S. Patent No. 6,756,187. Although the conflicting claims are not identical, they are not patentably distinct from each other because the current claims recite a process of reflowing an organic layer and the patent claims recite a process of deforming the layer before it is removed. A restriction requirement between the claims was not made in the parent case.
- 9. Claims 17-47 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-4, 7, 9-14, 17 and 19-21 are of copending Application No. 11/329,452.

 Although the conflicting claims are not identical, they are not patentably distinct from each other because the co-pending application recites infiltrating chemicals into an organic film to deform it while the claims of the

Application/Control Number: 10/773,272 Page 6

Art Unit: 1756

current application recite that an organic film is deformed by reflowing the layer which can include exposure to organic solvent.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

10. Any inquiry concerning this communication should be directed to Examiner K. Duda at (571) 272-1383. Official FAX communications should be sent to (571) 273-8300.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff, can be reached at 571-272-1385.

Information regarding the status of an application may be obtained from the Patent Application Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
